What? EDAM Bioimaging is an extension of the EDAM ontology, dedicated to (bio)imaging, image analysis, image processing, and bioimage informatics.

Why? EDAM Bioimaging fosters open science by enabling interoperable descriptions of techniques, instruments, software, data, publications, training, *etc.*

How? EDAM Bioimaging is developed in an open community spirit, in a welcoming collaboration between imaging experts, bioscientists, and engineers.

How can I contribute? EDAM needs your expertise! Please help by posting comments with suggestions or needs for clarification (here), or by creating GitHub issues, or by organising in a collaborative event. Please see https://github.com/edamontology/edam-bioimaging#contributing.

STRUCTURE OF EDAM

EXAMPLE CONCEPTS

rdfs:label	Correlative light and electron microscopy
rdfs:seeAlso	https://en.wikipedia.org/wiki/Correlative_light-electron_microscopy
hasExactSynonym	Correlative light-electron microscopy
hasNarrowSynonym	Integrated light-electron microscopy
hasNarrowSynonym	Integrated light and electron microscopy (ILEM)
hasNarrowSynonym	Volume correlative light and electron microscopy (Volume CLEM)
Abbreviation	CLEM
exactMatch	https://www.wikidata.org/wiki/Q28457249
hasDefinition	Correlative light and electron microscopy is the combination of lig (typically fluorescence microscopy) and electron microscopy of th

Relationships
- can use — Array tomography

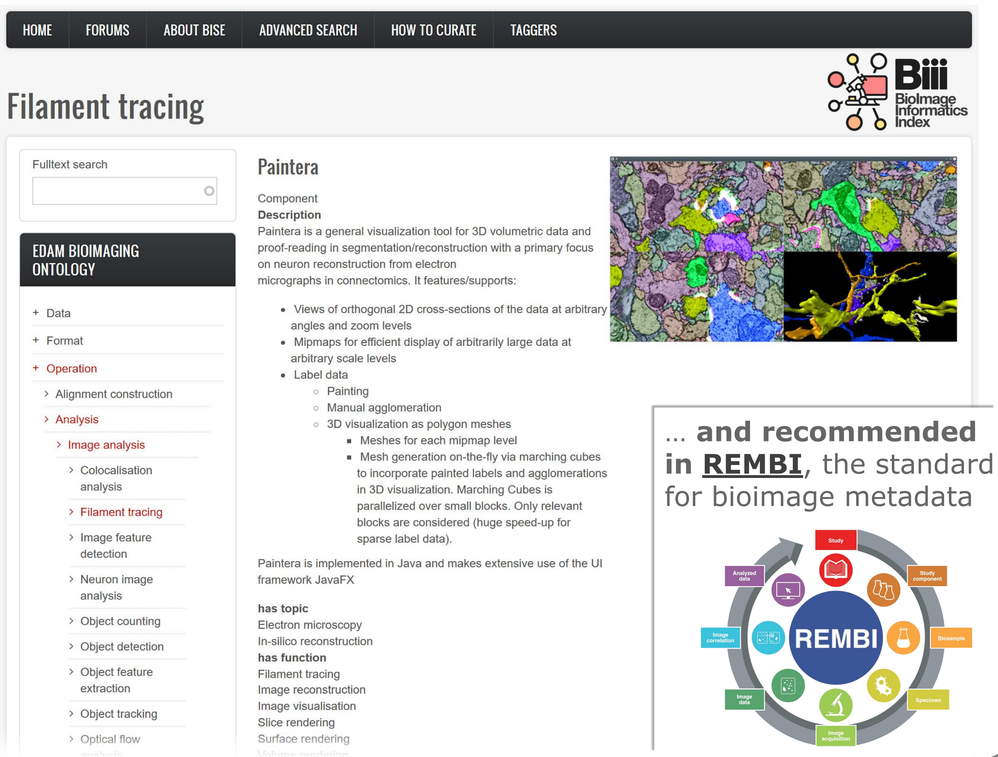

rdfs:label	Filament tracing
rdfs:comment	Filament tracing is an image analysis operation which consumes an image of a filamentous structure (it may be a tree-like structure, a filament network or a agglomeration of single 'stick-like' filaments), and outputs data that represent the filament(s), most commonly a skeleton representation of the filaments and their diameters or surfaces.
hasExactSynonym	Tubular structure extraction
hasRelatedSynonym	Curvilinear structure detection
hasRelatedSynonym	Curvilinear structure reconstruction
hasNarrowSynonym	Biofilament tracing
inSubset	bio
inSubset	imaging
